Alternative Agriculture A History From

Thirsk's basic premise is that at several points in British history (including after the black death, and during the agricultural depression of the late 19th century) overproduction of commodity crops (such as corn and grain) has been followed by an "alternative agriculture" that involves diversification of crops to include industrial crops and expanded production of fruits and vegetables.

Localised climate change is the favoured explanation for the origins of agriculture in the Levant. When major climate change took place after the last ice age (c. 11,000 BC), much of the earth became subject to long dry seasons. These conditions favoured annual plants which die off in the long dry season, leaving a dormant seed or tuber.
