The new Raspberry Pi 4 bootloader has finally come out of beta and made it's way into the official latest Raspbian! This has been long awaited since when the Raspberry Pi 4 was released it had no native support for booting from USB / Network but it was promised right from the start it would get it through a later update.

### Raspberry Pi 4 Bootloader USB Mass Storage Boot Guide

You can unlock the bootloader, but doing so deletes user data for privacy reasons. After unlocking, all data on the device is erased, that is, both private app data and shared data accessible over USB (including photos and movies). Before attempting to unlock the bootloader, back up any important files on the device.

### Flashing Devices | Android Open Source Project

Another situation that can warrant a bootloader recovery is when your bootloader is missing a bunch of settings despite being up to date. For example other readers have seen cases where despite having the latest firmware according to rpi-eprom-update they are missing key settings like the BOOT\_ORDER setting.

### Raspberry Pi 4/400 Bootloader Firmware Update/Recovery Guide

A bootloader is a small but extremely important piece of software that helps a computer boot an operating system (OS). Creating one is a challenging task even for a skilled low-level developer. That's why Apriorit driver development experts decided to share their experience on the subject.
