It seems IBM Tivoli Storage Manager for VMware vStorage API Data Protection or as usually called VADP is having a lot of attraction lately. Though on the other hand, many TSM & vSphere admins are confused about which version of TSM are supporting VADP and which version still force them to use the old VMWare Consolidated backup or VCB.

If you are using further rules in the configuration file to exclude data from backup, note that these are independent of the encryption rules. For example, if you are excluding everything from backup bar certain files (as per how to exclude everything from backup except a specific directory/folder ), and wish to encrypt those files, then you will need both include.encrypt and include rules:

## **How to encrypt files for backup and archive | IT Help**

The current default setting for TSM is to use direct IO on storage pools (can be set in TSM's configuration file dsm.opt). Even though direct I/O reduces the CPU utilization on the TSM server, it generally leads to significant performance penalties [1] and longer elapsed times, since writes are synchronous and need to
