How To Solve Solution Sets

lp_solve solves pure linear, (mixed) integer/binary, semi-continuous and special ordered sets (SOS) models. Note the word linear. This means that equations must be of the first order. $5 * x - 3 * y$ is an example. However $x * y$ is not linear and cannot be handled by lp_solve.

The general question of whether a set of equations has any consistent solution is quite a subtle one. For example, for most values of a , the equations $\{x=1, x=a\}$ are inconsistent, so there is no possible solution for x . However, if a is equal to 1, then the equations do have a solution. Solve is set up to give you

Time complexity of above solution is $O(m \log m + n \log n)$. The above solution first sorts both sets then takes $O(m+n)$ time to find the intersection. If we are given that the input sets are sorted, then this method is best among all. Method 3 (Use Sorting and Binary Search) This is similar to method 1. Instead of a linear search, we use Binary Search.
