The Muscular System - Chapter 8 Flashcards | Quizlet

O THE MUSCULAR SYSTEM Muscles, the specialized tissues that facilitate body movement, make up about 40% of body weight. Most body muscle is the voluntary type, called skeletal muscle because it is attached to the bony skeleton. Skeletal muscle contributes to body contours and shape, and it composes the organ system called the muscular system.

Document1 - Gore's Anatomy & Physiology

Human muscle system, the muscles of the human body that work the skeletal system, that are under voluntary control, and that are concerned with movement, posture, and balance. Broadly considered, human muscle—like the muscles of all vertebrates—is often divided into striated muscle (or skeletal muscle), smooth muscle, and cardiac muscle.

Schmidt, Michael / Muscular System Review Sheet Answers

The Muscular System The main function of the muscular system is movement. This includes walking, breathing, pumping the heart, and moving food through your digestive tract, just to name a few important examples. Muscles also create heat as they contract, helping to maintain a constant body temperature.
